## Indic Control Panel

**Adding New Language** It is easy to add a new Indian keyboard layout. You just need to click on Add New Language icon and a language popup will open where you need to enter a language name, and select a language pack. **Adding New Indic Keyboard** In addition, you can add an Indic keyboard layout by selecting "Add keyboard" in "Install Keyboard" tab. To do that, enter the layout name and type in the keyboard layout. **Multiple Keyboard Layouts** If you wish to have more than one Indic keyboard layout, just add them by clicking on Add new languages. **Language Settings** On the right side, there are three tabs that will help you to customize the application interface. First tab is "Install Language Pack", where you can select a language pack and install it on the system. Second tab is "Language Settings", where you can add the Indic keyboard layout. Third tab is "Advanced Settings", where you can select various options for the application, like, whether you want to remove the Indic keyboard layouts in the system, whether you want to disable the Indic layouts or not, whether you want to remove the Indic keyboard layouts when you install some applications and so on. **Advanced Settings** To exit the application, you just need to select "Exit" on the top right corner. **How to Use** To add a new language: 1. Right click on "Add New Language" icon in the application 2. Choose a language and a language pack. 3. Add a keyboard layout 4. Click on "Install" button to add the keyboard layout. **Change or Remove language packs** To remove a language pack, simply click on the remove button on the language pack tab and select "Remove" button on the top right corner. To change a language pack, simply right click on a language pack tab and select "Change" button. Then, a popup will appear to let you select a new language pack. **Keyboard Layout Settings** To change the language of a keyboard layout, simply right click on a keyboard layout and select the button "Language". **Why Indic Control Panel** At all time, Windows is the most popular operating system and millions of people use it all over the world. Windows is the biggest threat to Android and iOS. Almost all the Android users have installed Android softwares on their phone and Windows users have also installed Microsoft softwares on their computers. Windows and Android are also very similar in many ways
