Q: Null check with lambda expression in C# This question is about C#. We all know that we can use a nullable value, and all checks on them have nullable checks instead of value checks. So, I think, if we can use a nullable variable in

lambda expression to get a value, we can achieve the similar thing for nullable values. Here is a sample:

```
public static void
Main(string[] args) {
Console.WriteLine(null?
"Nullable?"); // Outputs
"Nullable?"
Console.WriteLine(null); //
Outputs null
Console.WriteLine((val) =>
val.Length); // Outputs 8
Console.WriteLine((val) => val ==
null); // Outputs false
Console.WriteLine((val) =>
```

val.Name); // Outputs Null } As for the reference, we can use?.

Operator to check if an object is nullable. A: You can use it in lambda expression, but you cannot use it to check for null reference. You can check for null reference using either null pattern or nullability pattern (aka Nullable pattern). The former is trivial: myNullableType x = null; The latter is somewhat more elaborate: myNullableType x = null; var obj = x; if (obj is null) { // Do something } Virus hunter Dr. Piotr
